

digitalcube

DigitalCube is an experienced boutique software development house. We provide tailored product development services, from initial design concept through to implementation, quality testing, product commercialization and field support.

Transforming
businesses
and redefining
your journey
with powerful
software
solutions.

INDUSTRIES WE SERVE

Telecommunications

We design and implement custom information systems for companies providing telecommunications services.

Sports & entertainment

We design and implement custom platforms for endurance sports and remote coaching businesses.

Education

We develop online learning platforms with payment systems that allow the client to build online courses, workshops and webinars.

Healthcare

We design and implement custom solutions for products in the healthcare industry that provide insight to create hyper-targeted, and personalized health plans.

Sports betting

We implement software solutions for international sport betting companies that manage core betting business operations.

- digitalization process
- software-as-a-service (SaaS) development
- mobile application development
- backend development
- desktop application development
- software testing and quality assurance
- technical support

The DigitalCube agile process has adopted an agile methodology that values adaptability and flexibility. The methodology aims to assist us to provide better responses to the ever changing business needs and therefore we focus on enabling our teams to deliver products in workable increments.

DIGITALCUBE 5 STEP AGILE PROCESS

1

PRODUCT SCOPE

The Product Scope starts with an immersive focus session where you'll sit down with our product experts to dive into the product vision and requirements from a business standpoint.

2

DESIGN BRIEF

The design brief starts with a product scope either created by us or provided by you with all the user stories, UX personas or list of features and stakeholder analysis.

3

KEY SCREENS

We start by creating the most important screens for your product. This allows you to see exactly how your product will look and give your feedback.

4

ALL SCREENS

Once you are happy and approve the key screens, we extend the design to the remaining screens and deliver the full product UX/UI. The screens will be adjusted if need be, to further enhance the product development.

5

DEVELOPMENT & TESTING

During this phase we progressively deliver the modules of the application, so you can test the product during the process. After all final improvements your product/service will be delivered to your users/customers in the time frame allocated.
